CodeFlow

By Ae Flow Tools

CodeFlow v1.0.0 – License & Usage Agreement

Thank you for downloading CodeFlow v1.0.0.
By installing or using this extension, you agree to the terms below. If you do not agree, please remove all related files from your system.

1. License Grant

CodeFlow v1.0.0 is an **After Effects extension** with a companion **Claude skill**. It is **free to download and try**.
Ae Flow Tools grants you a non-exclusive, non-transferable license to use:

- **CodeFlow-1.0.0.zxp** – the After Effects extension
- **codeflow-skill.zip** – the CodeFlow skill for Claude

> **Free trial:** every computer can run **5 builds** with no license key.
>
> **Lifetime license:** to keep building after that you need a license key. It is a one-time payment with no subscription, and it does not expire.

Use is permitted for personal and commercial projects.

2. License Key & Activation

- A license key activates CodeFlow on **1 computer** at a time, one that you personally own or operate.
- CodeFlow checks your key **online** when it opens and before each build, so an internet connection is required.
- You can move your license to another computer at any time, as often as you need: enter the key on the new computer and click **Deactivate** next to the old one (or use **Remove from this computer** in **Manage** on the old one).
- Keys are personal. A refunded or disabled key stops working. Refunds follow the policy of the store you bought your key from.

3. **Ownership**

CodeFlow is created and owned by Ae Flow Tools. All scripts, compiled files, branding, and assets remain the intellectual property of the author. **The videos and After Effects projects you make with CodeFlow belong to you.**

4. **Restrictions**

You may NOT:

- Redistribute, upload, or publicly share the files or your license key
- Resell, rent, sublicense, or bundle the extension
- Share with users who have not downloaded it from the official source
- Reverse engineer, decompile, or bypass the license check or the free-trial limit
- Remove branding, credits, or copyright notices
- Distribute modified versions

5. **Permissions**

You MAY:

- Use CodeFlow in commercial and client projects
- Use it on 1 computer at a time (move it to another computer whenever you like)
- Keep and use the After Effects comps you build forever, with or without CodeFlow
- Feature the extension in tutorials or reviews (credit appreciated)

6. **Disclaimer**

This extension is provided **"as-is."** No warranty or guaranteed technical support is included. The author is not responsible for any damages or losses resulting from its use.

Questions? Write to **contact@aeflowtools.com**.

What is in this download

- **CodeFlow-1.0.0.zxp** – install this in After Effects (see the Installation Guide)
- **codeflow-skill.zip** – add this to Claude (see the Installation Guide)
- **This manual**

Installation Guide

After Effects Extension Installation (ZXP)

Needs After Effects 2022 or newer and an internet connection.

1. Install a **ZXP Installer** (such as aescripts ZXP Installer or Anastasiy Extension Manager).
2. Open the installer.
3. Drag and drop **CodeFlow-1.0.0.zxp** into the installer.
4. Restart After Effects.
5. Open **Window → Extensions → CodeFlow**. You now have **5 free builds**.

Claude Skill Installation

The skill teaches Claude how to write your video as an HTML file that the CodeFlow panel can convert. Claude only has to **write a file**, so there is nothing else to install. You do need **Google Chrome or Microsoft Edge** on the computer where After Effects runs: the panel uses it quietly in the background to read the video.

> **Any Claude works:** the Claude app (chat), the desktop app, or Claude Code. No Node.js, no ffmpeg, no setup step.

Claude Code – run these two commands, then restart Claude Code:

```
/plugin marketplace add aeflowtools-cpu/codeflow
```

```
/plugin install codeflow@aeflowtools
```

Claude app – go to **Settings → Capabilities → Skills → Upload skill** and choose **codeflow-skill.zip**.

Unlock with a Lifetime License Key

1. Get your key at **aeflowtools.com/codeflow/pro**. Checkout is on Gumroad, where you see the price. Your key arrives right after checkout.
2. In After Effects open **Window → Extensions → CodeFlow** and click **Enter key**.
3. Paste your license key and click **Activate**. The panel then shows **Licensed** at the bottom.

User Manual

Make it, open it, build it

1. Make a video with Claude

Ask Claude: `make it for CodeFlow`, in any style you like. You can make a new motion video or use one you already made (HTML, SVG, CSS, GSAP, canvas). Claude gives you one **HTML file** and tells you the **full path** where it saved it. Double-click it to watch it in Chrome.

2. Drop it on the CodeFlow panel

Drag the HTML file onto the panel (or click **Open…**). It plays the video frame by frame and converts it, usually in under a minute, with no AI. The folder **Name (CodeFlow)** is saved next to your HTML. The panel shows the layers, size, length (wrong? type the right one and convert again), fonts, and **Notes** on parts that came in as pictures.

3. Choose where to build, then click Build

- **New comps** (default) – builds into its own folder in the Project panel: **CodeFlow ▸ project name**.
- **Active comp** – adds the whole project as one layer into the comp you have open, at the playhead. Good for combining several files.

Click **Build in After Effects**. Fonts that came with the file are installed first. Builds never overwrite each other (**project name 2**, …).

What you get

Editable **text** in the right font · bezier **keyframes** · **shape layers**, masks, track mattes, blend modes, blur, shadows, glows, gradients · **3D layers** with a camera · **images**, **video clips**, **sound** · **precomps** for clipped areas · **parent layers** for camera moves. Canvas drawing, 3+ colour gradients and noise come in as pictures, still moving with keyframes.

Other buttons

- ✕ **Clear** – empties the panel so you can open another file.
- **Manage** (bottom of the panel, when licensed) – see the computers using your key, **Deactivate** one, or **Remove from this computer**.
- **Update message** – when a new version is out, the panel tells you. Download the newest installer from **aeflowtools.com/codeflow** and install it over the old one.

Troubleshooting & Support

CodeFlow is not in Window → Extensions	Restart After Effects. Make sure you installed the .zxp with a ZXP installer and that you use After Effects 2022 or newer.
“License check failed”	CodeFlow needs internet to check your license. Check your connection (or proxy) and click **Try again**.
“Your free builds are used”	Click **Enter key** and paste your license key, or buy one at aeflowtools.com/codeflow.
“This key is active on another computer”	Click **Deactivate** next to the other computer. The key then activates here. You can move it as often as you need.
“The license store couldn't be reached”	The store that checks license keys did not answer. Wait a minute and try again.
“This license was refunded”	A refunded or disabled key stops working. Contact contact@aeflowtools.com if you think this is a mistake.
A font is listed as missing	Install that font (Google Fonts are free) and build again.
“CodeFlow needs Google Chrome or Microsoft Edge”	Install Google Chrome (free) and drop the HTML file again. The panel uses it quietly in the background to read the video.
The video is too short / too long	Type the right length (seconds) in the panel and click **Convert again with this length**, or ask Claude to add `const DURATION = 12;`
Text arrived as shapes, not text	If your SVGs come from Figma, export them with **Outline text** unchecked. Outlined text is only shapes, so it cannot become editable text.
Something is missing or looks different	Read the **Notes** in the panel: they list the parts that came in as pictures. Backdrop blur (frosted glass) is not converted. Video clips must be H.264 MP4 (WebM is not opened by After Effects). Very complex CSS 3D scenes may differ slightly.
The panel can't open my file	Drop an **HTML video**, a **.codeflow** file, a CodeFlow **.json** file, or a folder that contains one.

Need help?

Email **contact@aeflowtools.com** and tell us what you see, your After Effects version, and (if shown) the message in the CodeFlow panel.
